

Barrier Arms and Gates

Photo credit <https://parkingzonepost.wordpress.com/tag/gate-arm/>

Many Virginia Beach communities, businesses, and neighborhoods have "gated" access. Some use a barrier arm and others use a rolling gate like storage facilities. No matter what kind of barrier is used, they are designed to let one vehicle pass through before closing again. Always assume only one vehicle can pass through before it closes.

If you are co-responding with other emergency apparatus, **EACH** vehicle needs to enter the code or trigger the gate to open individually.

Gate codes can be usually be found in CAD under the premise hazard tab.

If you can't locate it in CAD, ask the dispatcher to send it to you or have the engine switch to a TAC channel to share it.
