

The supply vending machine only restocks EtCO₂ for INTUBATED patients.

If you used the EtCO₂ for a breathing patient (Nasal Cannula style), you must restock that at your station. Only the intubated style is required on the TEMS restock list.

Please only remove items that you used for your patient as they are billed for all withdrawals. Thank you!

The hospital only carries this (Intubated end tidal) in the vending machine. They do not carry the nasal cannula style end tidal.

If you used this (Nasal Cannula style end tidal), you must restock this item at your station.
